This is NOT a complete list; there are many other nonprescription and prescription medicines that contain acetaminophen as an active ingredient. Some brands listed above also have products which do not contain acetaminophen.

*Many over-the-counter and prescription medicines may have store brand or generic versions. For example, there are many store brand products that are similar to brands like Tylenol®, NyQuil®, and Robitussin®. Prescription medicines that come in generic form may list the ingredients in place of a drug name. (For example, “hydrocodone and acetaminophen” appears on the generic version of “Vicodin.”) Your prescription label may list the ingredients, the brand name, or both. Always read and follow the label, and ask your pharmacist or healthcare professional if you have questions about the ingredients in your medicine.
