

### **The Liver Health ECHO Program**

*Bringing Steatotic Liver Disease Prevention & Treatment to Frontline Healthcare Providers*

American Liver Foundation's (ALF) Project Echo program, created for healthcare professionals, will provide non-liver experts with best practices for the treatment and prevention of metabolic dysfunction-associated steatotic liver disease (MASLD). This program will provide:

- Structured support and practical prevention strategies for treating MASLD
- Mentorship from peers and experts in the field
- Collaborative problem-solving and resource-sharing
- Connection with other primary care providers and allied health professionals across the U.S.

The Liver Health ECHO Program is a virtual community of practice developed to equip healthcare providers with the necessary knowledge and skills prevent, identify and treat MASLD in their patients. Within this network, participants will gain support and mentorship, enhance their skills, and connect with leaders in the field all at no cost.
